Squint Eye Surgery in Bangalore – Advanced Strabismus Treatment at Seedieye

About the Treatment

Squint eye, also known as strabismus, is a condition where both eyes do not align properly and may point in different directions. This condition can affect both children and adults and may lead to double vision, blurred vision, poor depth perception, or eye strain if left untreated. At Seedieye Eye Care Centre, Bangalore, we provide advanced squint eye surgery and personalized treatment plans designed to restore proper eye alignment and improve overall vision quality.

Our experienced ophthalmologists use modern diagnostic technology and advanced surgical techniques to ensure safe, effective, and comfortable treatment outcomes. Depending on the severity of the squint condition, treatment may include corrective glasses, eye exercises, patch therapy, Botox injections, or surgical correction of eye muscles.

Why Choose Seedieye for Squint Eye Surgery?

- Experienced eye surgeons and pediatric ophthalmologists
- Advanced diagnostic and surgical equipment
- Customized treatment plans for children and adults
- Safe and minimally invasive procedures
- Affordable treatment options with quality care
- Comprehensive pre-operative and post-operative support

Seedieye Eye Care Centre is committed to providing patient-focused eye care with precision, safety, and comfort. Our team carefully evaluates every patient to determine the most suitable treatment approach for long-term visual improvement and proper eye coordination.

Symptoms of Squint Eye

- Eyes pointing in different directions
- Double vision
- Difficulty focusing
- Eye strain or headaches
- Poor depth perception
- Frequent blinking or tilting of the head

Early diagnosis and treatment can help prevent long-term vision complications, especially in children.
